EDUCATION

San Sebastian College – Recoletos Manila

Manila, Philippines

B.S. in Information Technology, 2nd Year

Expected 2028

- Saint Augustine Academia Silver Medalist — Academic Excellence, 1st Year (Both Semesters)

EXPERIENCE

Contributing Developer | DEVCON Kids Hub / DevKids Op

Jul 2026 – Present

DEVCON Manila, Volunteer

- Assigned to the AI/Automation role on a 4-person team building DevKid Ops, a web platform centralizing event management, volunteer onboarding, chapter operations, inventory, finance reporting, and impact analytics for DEVCON Kids.
- Engineered a RAG-powered chatbot that answers operational questions using DEVCON's internal documents, Built knowledgebase infrastructure (document chunking, vector embeddings, retrieval strategies) to make the chatbot reliable and accurate and developed automation tools: AI caption generator for social media.

PROJECTS

Java Inventory Management System | OOP Final Project

github.com/kxnn02/java-simple-inventory-system

- Built a CLI-based inventory system in Java from a UML class diagram, applying inheritance, polymorphism, encapsulation, and interfaces across Book/Cinema item types

CampusCurrents | Real-time Campus Communication System (React Native, Next.js, Supabase, TypeScript)

github.com/kxnn02/campus-currents

- Developed a mobile app that sends class suspension alerts and emergency notifications to students via push notifications, with an admin web dashboard for managing announcements and events
- Handled both frontend and backend work including user authentication (Google OAuth), database design with Supabase, and deploying the app for beta testing to classmates
- Coordinated a 5-person team, managed the project timeline, and gathered user feedback from beta testers to improve the app before final presentation

PasaBuy | Cross-Border Escrow dApp (Rust, Soroban, JavaScript, Stellar)

github.com/kxnn02/PasaBuy

- Built a smart contract in Rust (Soroban) that locks a buyer's XLM in escrow and only releases payment when delivery is confirmed, with on-chain dispute resolution handled by an admin
- Developed a frontend using vanilla JavaScript and Vite that connects to the Stellar testnet via Freightier wallet, allowing users to create orders, accept tasks, and track order status in real time
- Deployed the contract to Stellar Testnet and hosted the web app on Vercel, completing a full end-to-end dApp from smart contract logic to user interface

TECHNICAL SKILLS

Languages: HTML, CSS, Java, Python, JavaScript, SQL

Tools & Platforms: Git, GitHub, Kiro CLI

LEADERSHIP & ORGANIZATIONS

Junior Philippine Computer Society (JPCS), SSCR Manila Chapter

- 2nd Year Representative (2025–2026)
- Member, 1st Year (2024–2025)

AWS Learning Club Heron

- Skill Builder Member (July 2026 - Present)
